

KidGro Milk Replacer

KidGro 22/25

Crude Protein	minimum	22%
Protein from Milk Sources	minimum	22%
Crude Fat	minimum	28%
Crude Fibre	maximum	0.15%
Calcium	actual	0.95%
Phosphorus	actual	0.7%
Vitamin A	minimum	40,000IU/kg
Vitamin D3	minimum	4,000IU/kg
Vitamin E	minimum	150IU/kg
- Replacement Feeding of Multiple Birth Doe Kids		
- Feeding Meat and Dairy Kids		

Automatic Feeding

Grober is pleased to offer the Automatic Kid Feeder from Forsterk-Technik – an extremely powerful management tool. With up to 6 feeding stations per machine, one automatic feeder can reliably feed up to 120 kids.

Frequently, smaller meals are optimal for growing young animals. The automatic Kid Feeder allows kids to **feed ad lib**. The milk is always warm and freshly prepared in the mixer jar. Water and milk powder are rapidly and intensely mixed. Thanks to the integrated special boiler the water constantly maintains the set temperature.

KidGro and is specially formulated to function in the Automatic Kid Feeder and provide optimal nutrition to the growing lamb.

Call (800)265-7863 x219 for more information.

Feeding Kid Goats

- Kid Goats are considered pre-ruminant (under 2 weeks of age)
- The omasum and abomasum make up 70% of the digestive system
- Kid goats have difficulty digesting starch until the rumen starts to develop (around 2 weeks of age)
- KID-GRO Milk Replacer is LOW in starch – perfect for the pre-ruminant phase

Bloat in kids

Bloat is due to the overproduction of gas caused by organisms (not necessarily pathogenic) in the rumen or abomasum shortly after feeding.

Causes of Bloat

- Non-feed material causing problems in abomasum
- Management issues leading to poor rumen development
- Quick growth of microbes that produce excess gas
- Too much time between feedings

Consider Cold/Ambient Milk Feeding

When fed at 20°C, animals will drink smaller meals, more frequently

BOTTOM LINE:

- Offer smaller meals more frequently (minimum 3 feedings/day)
- Provide plenty of fresh water
- Encourage grain consumption

Features

- Formulated to meet nutritional requirements of newborn kids
- Skim Milk Powder
- 100% Milk Protein Sources
- High Quality, edible grade raw materials
- Stable forms of Vitamins and Minerals
- Optimal levels of Vitamin E, C, and Organic Selenium
- Excellent Palatability
- Ease of Mixing
- Variety of packaging sizes (1 kg, 5 kg, 10 kg, 20 kg)

Benefits

- Optimal concentration – Formulated to match nutritional profile of Doe's milk.
- Provides highly digestible nutrients for growth and health.
- Readily digested by young kids. Protein and amino acid balance important for optimal growth and metabolic controls.
- Superb suspension, solubility, and digestibility.
- Increased absorption by young animals.
- Maintain longer shelf life and assist growth and health.
- Antioxidants to promote health and immune function.
